exposure to an extreme marine environment.

2. A special hi-frequency thermal welding technology, replacing the use of glues, delivers an excellent performance of the inflatable tube. Specialised laser-cutting machines guarantee high quality production standards.

3. An exclusive "button" fastening substitutes standard straps, which can deteriorate and break over time, and assures a perfect sealing, water tight seal.

4. If your country in-force regulations do not require it, Arimar's liferafts can be inspected every 3 years, reducing the overall cost of your liferaft. In this way it will be inspected only 4 times during the 12-years warranty period.

equipment and tested processes. Also, they are periodically subject to tests ensuring quality service and high operating standards.

6. If you unfortunately happen to use one of our liferafts, we will contact you to ask for your experience with our liferaft in order to improve our products. You will also receive a new liferaft for free to safely go back to sailing.

7. Arimar is the official supplier of various Italian State Bodies (Coast Guard, Port Authority, Police, Army, Navy, Civil Protection, Firefighting forces and others). This allows us to actively collaborate with professionals using our products in extreme and often dangerous situations. Thanks to our professional expertise, we offer increasingly safe and performing liferafts for the pleasure boating market.

9. ISO 9001 certified company, Arimar has its own team of experts designing and testing liferafts, which collaborates closely with worldwide well-known Certification Authorities, such as RINA, Bureau Veritas, Lloyd register, etc.

For this reason, Arimar's liferafts are made in compliance with high quality parameters, along with the most advanced technologies and production methods.

10. It is a MADE IN ITALY brand. Arimar is currently one of the few companies manufacturing its liferafts entirely in Italy. Passion and attention to detail guide us and our skilled staff in our daily work

machinery especially for its productive processes, and use the technology of tissue welding by hot air, thereby achieving more and more higher quality standards.

MISSION

Creativity, enthusiasm and high competence are the focus for us in making and distributing products for professional and pleasure boating, featuring outstanding quality and technology, with the aim to meet our customers' satisfaction and wishes.
